                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ŏ
                                                                The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella comenuoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery compounds nucleic acids sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence given encodes the regulatory (activator) protein srmR. This sequence has the ability in complementation experiments to restore macrolide biosynthetic gene transcription in mutants having defective srmR genes due to insertional inactivation of that region of the S. ambofaciens genome. The srmR gene product activates macrolide biosynthetic gene transcription and may be used to increase the efficiency of macrolide biosynthesis. The translation product of this gene is useful for the generation of antibodies (polyclonal or monoclonal) which are useful in the detection of other macrolide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1584 GCGTGGGTGAGCGGG-----GCGCCCCGATCAGGTCGTCGAAGAACTCCTGGTGGCTCT 1531

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligounclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nuclectide comprises at least 15 nuclectides; or (b) a combination of an oligonuclectide comprises as least 15 nuclectides; or (b) a combination of an oligonuclectide comprising a sequence complementary to the complementary strand of a polynuclectide which comprises a 5'-end sequence and an oligonuclectide comprising a sequence complementary to the polynuclectide which comprises at least 15 nucleotides and the combination of the specification. The primer sets can be useful from those defined in the specification. The primers are also useful for synthesising polynuclectides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers and also useful for the cDNAs easily without any specialised methods. AAH03165 to AAH13628 and AAH13633 to AAH13632 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH1

Prepn. of recombinant gB and gD is described in WO88504587. The amino acid sequence and DNA sequence for gB 1 presented in AAP80914 and AAN80907 differ from that originally presented in Table 1 of International Publication No. WO 85/04587. The DNA sequence in Table 1 contains an error in that an additional nucleotide (G) is listed at position 607 which resulted in a shift in reading frame relative to AAN80907 from which this nucleotide has been deleted.
                                                                                                                             Sequence of Herpes simplex virus (HSV) glycoprotein B (gB) 2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Vaccine for treatment of herpes simplex virus - contains recombinant HSV glyco:proteins B and D \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3474 BP; 666 A; 1183 C; 1058 G; 567 T; 0 other;

The methods and products can be used to identify compounds which modulate (stimulate or inhibit) apoptosis in cells. They can be used to immortalise cells for the study of these cells or for growing cells in large numbers for the productions of proteins. They can also be

The herpes simplex virus (HSV) alpha-4 gene encodes infected cell protein number 4 (ICP4). Both the alpha-4 gene and ICP4 can be used to block cell apoptosis. Similarly the administration of an agent that inhibits ICP4 or the alpha-4 gene can induce apoptosis in HSV infected cells. This can be used for the immortalisation of cells, production of proteins, gene therapy, or inhibition of cell death induced in vivo. They can also be used for production of therapeutics comprising inhibitors of HSV ICP4 function, useful for treating HSV function.
                                                                                                                                                                                                                                                                                                                                      17 ThralaTrpGlyGluArgAsnGlyGlnLySArgSer-----ArgArg-ArgGl 32

Patent No. 5578481
GENERAL INFORMATION:
APPLICANT: ISHIKAWA, YOSHIHIRO
TITLE OF INVENTION: Cloning and Characterization of
TITLE OF INVENTION: Cardiac Adenylyl Cyclase
NUMBER OF SEQUENCES:
CORRESPONDED: American Cyanamid Company
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Conservative:

Sequence 11, Application US/08458568A
Patent No. 5821339
GENERAL INFORMATION:
APPLICANT: Schaffer, Priscilla A.
APPLICANT: Yeh, Lily
TITLE OF INVENTION: Compositions and Methods for Treatment of Herpesvirus
TITLE OF INVENTION: Infections
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSE: Woodcock, Washburn, Kurtz, Mackiewicz & No. 5821339ris
STREET: One Liberty Place, 46th floor
CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2846 CGGCGCCTGGAGGCCTACTGCTCCCGCGCGCGTGGCCGAGCTCACGAC---CACC 2902

/lab_host="labrary is a subtracted library derived polylinker; site_1: Not I; Site_2: Eco RI; The
NIH_BMAP_M_S2 library is a subtracted library derived from NIH_BMAP_M_S1, which in turn is a subtracted library derived from on the mouse brain (cerebellum, brain stems, olfactory bulbs, hypothalamus, cortex, amygdala, basal ganglia, pineal gland, striatum, hipoccampus). The driver used for subtraction consisted of a pool of 5,000 clones obtained from non-normalized and normalized mouse brain spinal cord libraries.

Double-stranded CDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGCCATTATGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGCCGAGCCGCATG-AT(30)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.65 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA)."
